

JS1000

**Guaranteed performance that
outperforms premium coatings
At a fraction of the cost.**

Years of research and experience in the manufacture of long-life fasteners have produced a true innovation: The Leland JS1000™ extreme life plating.

The proof is in the testing:

The incredible JS1000™ has been proven to remain completely rust-free in over 1000 hours of salt spray testing. That's a phenomenal 20 – 25 times the corrosion resistance of regular electro-zinc products – and considerably more than the best known coatings on the market.

JS1000™ delivers the kind of performance you've only been able to get by making the costly jump to stainless steel. At a price that is far more cost effective. The only product today that could offer superior rust resistance would be 300 Series stainless steel.

Check out the features of Leland's JS1000™:

- High lubricity for reduced tapping torque and less stress on small diameter fasteners!
- Completely non-toxic and approved by the FDA for use around food products!
- Totally compatible with aluminum and other metals used in construction!
- Hexavalent Chromium Free and R.O.H.S compliant – environmentally friendly!
- Can be powder coated to match any siding panel color!
- Powder coating over JS1000™ increases rust resistance (salt spray testing) by over three times!

**LONG LIFE
WARRANTY!**

Suitability of the products described herein, for the purpose intended, is the sole responsibility of the design engineer, architect or otherwise responsible person charged with the design of the structure.

Rely on North American quality!

JS1000™ is exclusive to Leland. And as with all Leland products, JS1000™ is 100% North American.
